Shipbuilding & Shipping Record

Electric propulsion for boats was developed in the early 19th century and--despite the advent of the internal combustion engine--continued with the perfecting of the modern turbo-electric ship. Sustainable and hybrid technologies, pioneered in

small inland watercraft toward the end of the 20th century, have in recent years been scaled up to create integrated electric drives for the largest ocean-going vessels. This comprehensive history traces the birth and rebirth of the electric boat from 1835 to the present, celebrating the Golden Age of electric launches, 1880-1910.

The Technical Review

Monthly Bulletin

Red Book

This book is a printed edition of the Special Issue "Thermodynamics and Statistical Mechanics of Small Systems" that was published in Entropy

Transactions of the American Society of Civil Engineers

Fleet Owner

Interavia

The Aero

Beretter om den engelske flyfabrik De Havillands historie, samtlige fremstillede fly, fly-projekter samt oversøiske firmaer og deres fly.

Palmer's Index to the Times Newspaper

Thermodynamics and Statistical Mechanics of Small Systems

British Piston Aero-engines and Their Aircraft

The Motor Boat

This book records 3,116 types of aircraft in which British aero-engines were flown, including examples of the many foreign-built aircraft. It is the first serious attempt to link these engines, their design and development with the aircraft which they powered. There are 873 types of engine reviewed in the book which were built and flown in Britain up to 1955. The working day of the big, powerful and noisy piston aero-engine may now seem to be almost over, but this book is also a reminder that the ancestry of the present huge jet engines goes back to the supercharger, the principal mechanical means by which the piston engine developed its great power.
