China and International Fisheries Law and Policy

Building an Ecosystem Approach to Aquaculture

This book deals with China's response to international fisheries law and policy as envisaged in the LOSC framework and post-LOSC fisheries instruments. As the first monograph of its kind dealing with the complex issue of the global fisheries crisis and China's fisheries management practice over a significant period of time, the book builds a bridge between China and the world for a better understanding of Chinese fisheries management. It will be of great value to academics, professionals, and policy-makers alike.

Artificial Reefs in European Seas

This book provides, in one place, basic information and considerations necessary to plan, build and operate seawater systems for culturing purposes. It

provides design, construction and operations guidance for seawater (salinities from freshwater to brine) systems with flow rates of 10-1,000 gallons (40-4,000 liters) per minute. While the book concentrates on general circumstances, situations and concepts, comprehensive referencing of text and annotated bibliographies are provided in critical technical areas to allow readers to pursue specialized areas of interest. This upgraded and expanded Second Edition contains a considerably increased number of numerical examples relative to the first edition to demonstrate practical applications of the concepts and presented data.

Issues in Environmental Law, Policy, and Planning: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Environmental Law, Policy, and Planning. The editors have built Issues in Environmental Law, Policy, and Planning: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Environmental Law, Policy, and Planning in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable,

authoritative, informed, and relevant. The content of Issues in Environmental Law, Policy, and Planning: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

International Food Law and Policy

This study considers the elements of a legal framework designed to promote a sustainable commercial aquaculture. These relate to: a secure right to property and clean water; avoidance of unnecessary costs; and a licence system, including a system for environmental impact assessments and enforcement of codes of practice. Environmental supervision should extend to: controls over the use of exotic species and products from modern biotechnology. These include genetically modified organisms, disease control and health management, and to any water quality concerns created by the proposed project. The study analyses the aquaculture industries of Madagascar, Malawi, Mozambique, Nigeria and Zambia against these criteria. Improvements in legislation applicable to the individual countries, but which require consideration by all sub-Saharan countries are then suggested.

International Journal of Estuarine and Coastal Law

Compiled by the United Nations Office of Legal Affairs, this bibliography covers 21 subject categories based on the major topics of the United Nations Convention of the Law of the Sea. It is intended for the use of those interested in ocean affairs and the law of the sea matters in general and in the UN Conventional on the Law in the Sea in particular.

Report of the Workshop on the Implementation of the 1995 FAO Code of Conduct for Responsible Fisheries in the Pacific Islands

Design and Operating Guide for Aquaculture Seawater Systems

Ocean and Coastal Law and Policy addresses the reasons for this decline and explains the laws protecting the marine environment in a clear and concise manner. The authors have real-world experience with their topics, and discuss how the law works in practice rather than merely in theory. This is an excellent resource for the practitioner, government official, or scholar in their efforts to transition to an ecosystem-based management approach.

Current Publications in Legal and Related Fields

Assessment of Freshwater Fish Seed Resources for Sustainable Aquaculture

A comprehensive assessment of the innovation system of Chile, focusing on the role of government. It assesses the current status of Chile's innovation system and policies, and identifies where improvements are most needed in order to make the most efficient use of additional public investment.

Ocean and Coastal Law and Policy

520 Aquaculture growth worldwide involves the expansion of cultivated areas, a higher density of aquaculture installations and farmed individuals, and greater use of feed resources produced outside the immediate culture area. To ensure that such development of the sector does not carry negative impacts on the environment and on parts of society due to weak regulation or poor management, an ecosystem approach for aquaculture (EAA) is encouraged. These proceedings consider aspects relevant for an ecosystem-based management in aquaculture. The document also includes two comprehensive reviews covering the status of brackish, marine and freshwater aquaculture within an ecosystem approach perspective.--Publisher's description.

Aquaculture Law and Policy

First published in 1990, The Economics of Salmon

Read Free Aquaculture Law And Policy Towards Principled Access And Operations Routledge Advances In Maritime Research

Aquaculture was the first book to systematically analyse the salmon aquaculture industry, from both a market and production perspective. Since publication of the first edition of this book, the salmon aquaculture industry has grown at a phenomenal rate, with salmon now being consumed in more than 100 countries worldwide. This second edition of a very popular and successful book brings the reader right up to date with all the major current issues pertaining to salmon aquaculture. Commencing with an overview of the production process in aquaculture, the following chapters provide in-depth coverage of the sources of the world's supply of salmon, the growth in productivity, technological changes, environmental issues, markets, market structure and competitiveness, lessons that can be learnt from the culture of other species, optimal harvesting techniques, production planning, and investment in salmon farms. Written by Frank Ashe and Trond Bjørndal, two of the world's leading experts in the economics of aquaculture, this second edition of *The Economics of Salmon Aquaculture* provides the salmon aquaculture industry with an essential reference work, including a wealth of commercially important information. This book is also a valuable resource for upper level students and professionals in aquaculture and economics, and libraries in all universities and research establishments where these subjects are studied and taught should have copies of this important book on their shelves.

This publication is presented in two parts.

National Aquaculture Act of 1979

Report of the Sixth Session of the Advisory Committee on Fisheries Research

The aquaculture industry is fast expanding around the globe and causing major environmental and social disruptions. The volume is about getting a 'good governance' grip on this important industry. The book highlights the numerous law and policy issues that must be addressed in the search for effective regulation of aquaculture. Those issues include among others: the equitable and fair assignment of property rights; the design of effective dispute resolution mechanisms; clarification of what maritime laws apply to aquaculture; adoption of a proper taxation system for aquaculture; resolution of aboriginal offshore title and rights claims; recognition

of international trade law restrictions such as labeling limitations and food safety requirements; and determination of whether genetically modified fish should be allowed and if so under what controls. This book will appeal to a broad range of audiences: undergraduate and postgraduate students, academic researchers, policy makers, NGOs, practicing lawyers and industry representatives.

Issues in Environmental Law, Policy, and Planning: 2011 Edition

Canadian Ocean Law and Policy

This publication contains the report of the workshop, held in Fiji in October 2003. Issues discussed include: the 1995 FAO Code and its framework, legal considerations and issues; responsible fisheries management and post-harvest practices; aquaculture and inland fisheries; and the integration of fisheries into coastal area management.

The British National Bibliography

Fisheries Newsletter

The Advisory Committee held its sixth session in Rome, Italy in October 2006 and topics discussed included: a review of the work of the FAO Fisheries and Aquaculture Department with a focus on fish trade, small-scale fisheries and aquaculture; and

support for the work of FAO in aquaculture, particularly the timely inclusion of fish species in the Programme of Work of the FAO Commission on Genetic Resources for Food and Agriculture.

Institutional, policy and regulatory framework for sustainable development of the Egyptian aquaculture sector

Aquaculture Magazine

UNB Law Journal

In recognising an urgent need to move beyond case studies and develop a conceptual synthesis, the scope of this volume is broad, covering the principal elements of both the invasion process and human responses to seaweed invasions. This includes addressing legal frameworks for regulatory control, practical means to track and respond to invasive seaweeds in the field, as well as the ecology of invasions. The result is both a valuable multidisciplinary synthesis of work to date, and a pointer to future challenges and priorities.

Strategy for the 1980's in Ocean and Coastal Law Policy

Regional Commission for Fisheries

Read Free Aquaculture Law And Policy Towards Principled Access And Operations Routledge Advances In Maritime Research

The third session of the Regional Commission for Fisheries (RECOFI) was held in Doha, State of Qatar, from 9 to 11 May 2005. All eight member countries were represented in this session as well as observers from the Gulf Cooperation Council (GCC), the United Nations Environment Program (UNEP) and the WorldFish Center. The Commission reviewed the activities that have taken place during the intersessional period, in particular those related to the implementation of the recommendations of the second session as well as meetings of the Working Group on Aquaculture (WGA) and the Working Group on Fisheries Statistics (WGFS). The Commission adopted its program of work and budget as well as a number of decisions and recommendations on several issues, including those related to aquaculture in the RECOFI area and issues on capture fishery statistics.--Publisher's description.

Seaweed Invasions

Aquaculture

Cold-water Aquaculture in Atlantic Canada

This document provides an overview of all facets of the aquaculture industry in Eastern Canada. It offers a balanced view of the species that either are in commercial production now or have a potential for growth in the future. The book also examines the

various socio-economic and environmental issues that are influencing the direction and development of the industry.

OECD Reviews of Innovation Policy: Chile 2007

The Working Group on Aquaculture (WGA reviewed the decisions and recommendations of the third session of the Commission held in Doha, Qatar from 9 to 11 May 2005, and the activities of the WGA that followed. Among the activities, the experts acknowledged that progress had been made with regards to the technical arrangements that would lead to the preparation of the RECOFI Regional Aquaculture Information System (RAIS). The WGA acknowledged that the legal and policy framework project proposal remained a major regional priority and agreed to actively seek funding support from the Commission Members as well as to approach regional donor agencies through the coordination of the RECOFI Secretariat.--Publisher's description.

Promotion of Sustainable Commercial Aquaculture in Sub-Saharan Africa: Legal, regulatory and institutional framework

This three-volume Manual on International Maritime Law presents a systematic analysis of the history and contemporary development of international maritime law by leading contributors from across the world. Prepared in cooperation with the International

FAO Fisheries and Aquaculture Technical Paper

The Regional Commission for Fisheries (RECOFI) Regional Technical Workshop on Sustainable Marine Cage Aquaculture Development, held from 25 to 26 January 2009 in Muscat, Sultanate of Oman, was organized following the endorsement of the biannual work plan of the Working Group on Aquaculture (WGA) by the Commission at its fourth session (Jeddah, Kingdom of Saudi Arabia, 7-9 May 2007). The activity was endorsed in view of the growing importance and interest of this aquaculture sub-sector across the region. The workshop focus was on environmental impact assessment and monitoring, and aquaculture licensing for marine aquaculture cage systems. It also aimed at identifying constraints and shortcomings that needed to be dealt with to support the development of the cage industry and facilitate investments from the private sector. The document contains a set of suggestions and recommendations made by the experts with regard to technical and policy requirements needed to support the growth of the aquaculture sector as a whole and more specifically cage fish farming. RECOFI members have been encouraging cage aquaculture over the years, however, the current level of development varies considerably among the countries and, in general, cage aquaculture can only be considered an economic activity in its infant stages of development. The major constraints identified in the establishment of fish cages, particularly along the northwestern shores of the Gulf, have been the limited availability

of suitable farming sites characterized by shallow waters, highly fluctuating salinity and temperature levels and inadequate sea currents. Other limitations included price competition from wild-caught fish, inadequate farming technologies for the region and the limited availability of endemic candidate species of commercial importance suitable for cage aquaculture. The report also contains three review documents on marine cage aquaculture in the region, regulation of Norwegian net-cage fish farming, and a review on cage aquaculture licensing procedures prepared as background discussion papers for the workshop. With specific regard to environmental impact assessment (EIA), the discussions held at the workshop clearly indicate that there is a need for the region and individual Commission members to develop an ad hoc EIA format based on the conditions of the local marine environment as this would determine the level of detail and elements needed to complete a meaningful and useful EIA study. The experts also agreed on the importance to establish regional Environmental Quality Standards (EQS) for fish farm sites in order to set the limits for maximum permissible impact on the area exploited by the cage farming industry and assist in establishing monitoring programmes. With regard to cage aquaculture licensing, the experts acknowledged that a clear licence system is required for exercising legal and administrative control over aquaculture operations as it confers different rights and obligations, and allows public control with regard to environmental protection and the economic sustainability of the farming practices. Furthermore, it was noted that the legislation involved and process in aquaculture

licensing should be transparent, readily available and include information on processing time, payable fees, etc. A proposed cage aquaculture licence procedure was discussed and proposed at the workshop based on the format developed and adopted by the Sultanate of Oman. Other matters discussed at the workshop included the occurrence of hazardous algal blooms in the Gulf and its effects on fish farming and the possibility of establishing a regional fish cage farm for demonstration, research and training purposes.

The IMLI Manual on International Maritime Law

Artificial Reefs in European Seas focuses on artificial reef research in the Mediterranean and NE Atlantic. The book describes most of the long-term projects running in European seas, presents the legal and economic issues, and suggests future uses for artificial reefs in the European context. Readership: Professionals working on or interested in the uses of artificial reefs for fishery management, coastal zone management, aquaculture and nature conservation. The case studies of reef research programmes make the book ideal for degree students studying topics in ecology, and fisheries and coastal management.

Sea Grant Law and Policy Journal

Aquaculture Law and Policy

With aquaculture operations fast expanding around the world, the adequacy of aquaculture-related laws and policies has become a hot topic. This much-needed book provides a three-part guide to the complex regulatory landscape. The expert contributors first review the international legal dimensions, including chapters on law of the sea, trade, and access and benefit sharing. Part Two offers regional perspectives, discussing the EU and regional fisheries management organizations. The final part contains eleven case studies exploring how leading aquaculture producing countries have been putting sustainability principles into practice.

China and International Fisheries Law and Policy

International Food Law and Policy is the first interdisciplinary piece of academic literature of its kind with a comprehensive, reader-friendly approach to teaching the major aspects of food regulation, law, policy, food safety and environmental sustainability in a global context. The sections are grouped by continents and focus on a range of cross-disciplinary subjects, such as public health, international food trade, the right to food, intellectual property and global regulatory aspects of food production. With its systematic approach, this book will be a valuable resource both for professionals working in food regulation and anyone interested in the subject. It provides a solid foundation for courses and master's programs in environmental management, food law, policy and regulation, and sustainable development
