This unique book provides a comprehensive picture of the vivid kaleidoscope of traditional medicine in Asia presented by 34 eminent authors from 15 countries belonging to the different systems like Ayurveda and Chinese Traditional Medicine. Important emerging areas such as harmonization of the traditional systems with modern medicine and the growing role of these systems in the health care structure of countries are also dealt with. Legislation and regulation of these systems and practitioners, an area of growing concern, the need for good preclinical toxicology studies and scientific clinical evaluation of the products and medicinal plants used for therapy are exhaustingly dealt with. The vital issue of protection of traditional systems of medicine and patenting of medicinal plants is discussed in detail. The book is replete with suggestions, and ideas aimed at making traditional systems more effectively, and more widely used for health care. The book also covers the prevailing situation regarding the use and other aspects of traditional medicine in the 10 Member countries of the South-East Asia Region of the World Health Organization.

The proposed book will act as a guide for scientists and clinicians to the unique information that MRS can provide. It will be a comprehensive overview of clinical and pre-clinical MRS applications and potential clinical utility of MRS biomarkers in degenerative brain diseases from leading experts in the field. MRS has proven to be a powerful complementary tool to MRI for the diagnosis and monitoring of disease progression and response to treatment because it can detect changes in cell density, cell type, and biochemical composition, not just structural changes. As the population in the developed world continues to age, neuroimaging for diagnosis, prognosis, and therapy monitoring of neurodegenerative diseases becomes increasingly important and there has been a recent surge of clinical and pre-clinical applications of MRS indicating that this technique can provide robust and non-invasive biomarkers of degeneration.

The first edition of Functional foods: Concept to product quickly established itself as an authoritative and wide-ranging guide to the functional foods area. There has been a remarkable amount of research into health-promoting foods in recent years and the market for these types of products has also developed. Thoroughly revised and updated, this major new edition contains over ten additional chapters on significant topics including omega-3 polyunsaturated fatty acids, consumers and health claims and functional foods for obesity prevention. Part one provides an overview of key general issues including definitions of functional foods and legislation in the EU, the US and Asia. Part two focuses on functional foods and health investigating conditions such as cardiovascular disease, diabetes, cancer, obesity and infectious diseases as well as and the impact of functional foods on cognition and bone health. Part three looks at the development of functional food products. Topics covered include maximising the functional benefits of plant foods, dietary fibre, functional dairy and soy products, probiotics and omega-3 polyunsaturated fatty acids (PUFAs). With its distinguished editors and international team of expert contributors, Functional foods: Concept to product is a valuable reference tool for health professionals and scientists in the functional foods industry and to students and researchers interested in functional foods. Provides an overview of key general issues including definitions of functional foods and legislation in the EU, the US and Asia Focuses on functional foods and health investigating conditions such as cardiovascular disease, diabetes, cancer, obesity and infectious diseases Examines the development of functional food products featuring maximising the functional benefits of plant foods, dietary fibre, functional dairy and soy products

Although there are several gaps in understanding the many issues related to neurological disorders, we know enough to be able to shape effective policy responses to some of the most common. This book describes and discusses the increasing public health impact of common neurological disorders such as dementia, epilepsy, headache disorders, multiple sclerosis, neuroinfections, neurological disorders associated with malnutrition, pain associated with neurological disorders, Parkinson's disease, stroke and traumatic brain injuries. It provides information and advice on public health interventions that may reduce their occurrence and consequences, and offers health professionals and planners the opportunity to assess the burden caused by these disorders. The clear message that emerges is that unless immediate action is taken globally, the neurological burden is likely to become an increasingly serious and unmanageable.

Since time immemorial Man has pursued the elusive elixir of life. The wisdom of ancient Chinese medicine declared immortality unattainable, but offered the elixir of longevity through lifestyle, diet, the judicious use of herbal tonics and the practice of subtle but powerful exercises of qigong and taijiquan. This concise volume explains in modern scientific language the principles of ancient Chinese methods of health and the practice of yangsheng 养身 or life cultivation. Natural holistic solutions to health issues and the intricacies of Chinese diagnosis and therapies are brilliantly exposed, complete with detailed descriptions of herbs, acupuncture and tuina. Discover appetizing recipes for soups, porridges and teas that give you that healthy glow and nourish your body and soul. Based on a series of popular lectures by the authors, this book opens a new chapter in your pursuit of a long and fulfilling life. It is also excellent preparation for more advanced studies in Chinese medicine.

Neuroprotection is a novel perspective for the treatment of disorders that lead to

neurodegeneration and disabilities as a result of deterioration of neurons due to apoptosis, oxidative stress, excitotoxicity, and other mechanisms. These mechanisms have implications not only for neurodegenerative disorders, but also for schizophrenia, mood and cognitive disorders. The purpose of this book is to provide an up-to-date overview of basic and clinical studies concerning the neuroprotective approach, mechanisms, and several compounds with neuroprotective properties that may contribute to more efficacious treatment of major mental health disorders. The book is divided into two sections. The first section serves as an introduction and overview of conceptual issues of the neuroprotective approach, and some neurobiological advances. Chapters in this section review definitions, perspectives, and issues that provide a conceptual base for the rest of the book. In addition, this part includes chapters in which the authors present and discuss the findings from basic studies of neurodegenerative mechanisms that are associated with the pathogenesis of major mental health disorders. The second section focuses on findings obtained from clinical trials with neuroprotective compounds, and neuromodulatory techniques. The take-home message is that principles of the neuroprotective approach may be applied to treatment of schizophrenia, mood and cognitive disorders. Contributors to this book are among the most active investigators and clinicians in the field who provide new perspectives not only clarifying ongoing controversies but also propose diverse aspects and new insights to neuroprotection. This book is intended for a broad readership, which includes a broad spectrum of readers including neuroscientists, psychiatrists, neurologists, pharmacologists, clinical psychologists, general practitioners, geriatricians, graduate students, and policy makers in the fields of mental health.

The explosion of information about complementary and alternative medicine (CAM) has demanded the attention of health professionals and responsible consumers, including the elderly. Increasingly, medical schools are providing education about CAM. This book brings together for academicians and interested mainstream practitioners much of the current information on CAM and its role in the health of the elderly. The individual chapters are thoroughly researched and quite readable, even for patients and the lay public concerned with the state of the evidence and art supporting CAM's role in prevention and management of illness and well-being. This book provides educators with much necessary information needed to prepare coursework and learning activities. Although definitive data are lacking regarding efficacy and even safety of CAM methodologies, many chapters in this book summarize the existing evidence in a usable way. The topics analyzed range from well-accepted therapies, such as vitamin E for dementia and zinc tablets for the common cold, to far less conventional therapies such as transcendental meditation. The conclusions are often surprising, but well-presented and defended. Even the most highly controversial areas, such as the use of acupuncture to treat low back pain and osteoarthritis of the knee, are thoroughly and fairly reviewed. Finally, the chapters address some of the political issues that challenge CAM. These issues include who should be allowed to practice a CAM discipline whose efficacy is not based on the scientific method, and some of the state-to-state variations in practice standards and licensure.

This book examines how changes in reproductive patterns (such as the number and timing of births and spacing between births) have affected the health of women and children in the developing world. It reviews the relationships between contraceptive use, reproductive patterns, and health; the effects of differences and changes in reproductive patterns; as well as the role of family planning in women's fertility and health.

Combining the research and study of integrative Chinese and Western Medicine, Integrative Cardiovascular Chinese Medicine: A Prevention and Personalized Medicine Perspective presents a clear, structured base to guide clinical practice and encourage collaboration between Chinese medicine and Western medicine practitioners. This complete reference work thoroughly covers the pathophysiology of cardiology-related diseases, and compares, juxtaposes, and integrates Western and traditional Chinese medicine (TCM). Anika Niambi Al-Shura provides a realistic scope of cardiology treatment and the integration of Western and Chinese medicine, establishing a basis for standardization and a rationale for the inclusion of TCM in cardiology, and identifying and inspiring ideas for future research. Integrates Western and Chinese medicine for a realistic scope of cardiology treatment Establishes basis for standardization and rationale for the inclusion of traditional Chinese medicine in cardiology "Clinical pearls" provide a guiding base of traditional Chinese medicine in clinical use Offers a reference section that lists the latest in published studies Presents easy access to the medicines and herbs used in both Chinese and Western medicine, including photos and information about the current patents

This is the original Chinese edition of the Ben cao gang mu. Compiled in the second half of the sixteenth century by a team led by the physician Li Shizhen (1518–1593) on the basis of previously published books and contemporary knowledge, the Ben cao gang mu is considered the largest encyclopedia of natural history in a long tradition of Chinese materia medica works. Its description of almost 1,900 pharmaceutically used natural and man-made substances marks the apex of the development of premodern Chinese pharmaceutical knowledge.

Vascular dementia is one of the most common forms of mental deterioration for the elderly, second only to Alzheimer's disease. It should not be defined as a single disease, but rather as a group of syndromes that relate to different vascular mechanisms. This is one of the first books to be solely dedicated to the specific class of vascular dementia known as subcortical vascular dementia. The strict focus of the chapters give an depth review that will clarify many different aspects and give an unprecedented amount of detail about this clinical problem. Considering that vascular dementia can be prevented with early diagnosis, the research presented in this book will be important for both students and specialists of this important field.

This work presents up-to-date information on chemical, pharmacological, clinical studies and historical uses of common dietary Chinese herbs. Authored by native experts in the field, the reader is introduced to each herb with a brief chronological review of Chinese literature on dietary herb uses, with chapters dedicated to each selected herb including color photos for each herb. In addition, Chinese characters as well as the Latin botanical name indices, and chemical structures for the known active compounds are also provided. The clear layout examines the health benefits that have been studied for centuries, including current clinical and toxicological data. A wide range of Traditional Chinese Medicine (TCM) herbs are investigated for their suitability into daily diets for maintaining general wellness or disease prevention. In the past decades, natural health products, dietary supplements, functional foods, or nutraceuticals have emerged in the West due to the increasing demand for non-pharmaceutical healthcare products. Traditional Chinese Medicine disease prevention and treatment incorporates the use of foods, and herbal medicine in an integrated manner, and thus the dietary Chinese herbs in used in TCM for thousands of years could be sources for developing new, effective, and safe ingredients to capture the rapidly expanding opportunity in the global market place.

This book, which is the result of contributions from a team of international authors, presents a collection of materials that can be categorized into two groups. The first group of papers deals with clinical toxicology topics including poisoning by anticoagulant rodenticides, food toxins, carbon monoxide, the toxicity of beta-lactam antibiotics, acute neonicotinoid poisoning, occupational risk factors for acute pesticide poisoning, activating carbon fibers, and date pits for use in liver toxin adsorption. The second group of papers deals with forensic or analytical toxicology topics such as simplified methods for the analysis of gaseous toxic agents, rapid methods for the analysis and monitoring of pathogens in drinking water and water-based solutions, as well as the linkages between clinical and forensic toxicology. Each chapter presents new information on the topic discussed based on authors' experience while summarizing existing knowledge. As such, this book will be a good teaching aid and can be a prescribed or recommended reading for postgraduate students and professionals in the fields of public health, medicine, pharmacy, nursing, biology, toxicology, and forensic sciences.

Introduction to the eBook Over the past few decades global prevalence of Alzheimer's disease is increased and it became a major public health problem. Millions of elderly population have been suffering from Alzheimer's disease worldwide. Many efforts have been made aiming to prevent Alzheimer's disease due to its rising prevalence, the lack of a curative treatment and its high socio-economic cost. Although the study of Alzheimer's disease is moving ahead rapidly, cause of the disease has not been fully clarified yet. Alzheimer's disease is a slowly progressing brain disorder characterized by loss of synapses and neurons in cerebral cortex and in certain sub-cortical regions which leads to memory impairment, cognitive decline, and eventually death.

Recent major shifts in global health care management policy have been instrumental in renewing interest in herbal medicine. However, literature on the development of products from herbs is often scattered and narrow in scope. Herbal Bioactives and Food Fortification: Extraction and Formulation provides information on all aspects of the extraction of biological actives from plants and the development of dietary supplements and fortified food using herbal extracts. The book begins with a brief survey of the use of herbs in different civilizations and traces the evolution of herbal medicine, including the emergence of nutraceuticals from the discipline of ethnopharmacology and the Alma Ata Declaration of 1978. It moves on to describe various aspects of the extraction process, including selection of plant species, quality control of raw materials, the comminution of herbs, and the selection of solvents. It also describes the optimization of extraction in relation to response surface methodology before describing uses of herbal extracts in food supplements and fortified foods. With special attention paid to stability analysis and the masking of tastes, the book gives an overview of the formulation of various types of tablets, capsules, and syrups using herbal extracts. It also describes the benefits of foods fortified with herbal extracts such as soups, yogurt, sauces, mayonnaise, pickles, chutneys, jams, jellies, marmalades, cheese, margarine, sausages, bread, and biscuits, as well as some beverages. Herbal Bioactives and Food Fortification covers the fundamental steps in herbal extraction and processing in a single volume. It explains how to choose, optimize, analyze, and use extracts for fortification, making it an excellent source for nutraceutical researchers and practitioners in science and industry.

## **Pain Management and the Opioid Epidemic**

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in

early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

## **Integrative Cardiovascular Chinese Medicine**

There is a wide scope of clinical phenomenology in Alzheimers disease, regarding the age of onset, presenting features, rate of progression and appearance of other clinical manifestation. Although clinical appearance and neuropathological hallmarks have been defining AD since its first description, major factors which trigger pathology are still unknown. The role of comorbidity is discussed controversially. Important environmental risk factors in AD development are continuous stress, low education and cardiovascular risk factors such as alcohol intake, smoking, hypertension. The role of lipids and cholesterol has been recognized, but the relevant pathogenetic steps are still to be identified. There is an urgent need to understand molecular disease pathogenesis in order to develop early therapeutic targets for the disease.
