The Electrical Journal

Journal of the Institute of Brewing

Machine Drawing and Design for Beginners

Electrical Installations Technology

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

Elementary Manual on Applied Mechanics

The field of professional, academic and vocational qualifications is ever-changing. The new edition of this highly successful and practical guide provides thorough information on all developments. Fully indexed, it includes details on all university awards and over 200 career fields, their professional and accrediting bodies, levels

of membership and qualifications. It acts as an one-stop guide for careers advisors, students and parents, and will also enable human resource managers to verify the qualifications of potential employees.

Page's Engineering Weekly

The King of Illustrated Papers

This book has been written as an exam practice aid to complete the City & Guilds Level 3 NVQ Diploma in Electrotechnical Technology (5357). It sets out methods of studying, offers advice on exam preparation and provides details of the scope and structure of the examinations. This qualification is for learners who want to work as an electrician and those installing electrical systems and equipment in buildings and structures. It helps acquire the necessary knowledge regarding the design, installation and commissioning of electrical systems. The book: Includes guidelines and advice about sitting the exam Includes practice examinations, with fully worked and 'model' answers Acts as a valuable revision aid, to help students prepare for the full exam

The Educational year book. [5 issues].

Develop the reading, writing, speaking and listening skills needed to succeed with the only resource written specifically for the Caribbean region and published in association with City & Guilds. This resource is ideal for students, trainees and adults who desire to improve their language skills whether in preparation for further education or for employment opportunities. - Thoroughly and systematically explore topics across each level with clear explanations, worked examples, tasks and test your knowledge multiple choice activities. - Focus your learning on the key concepts and strategies with learner tips and helpful reminders throughout. - Provides comprehensive coverage of all three certification levels, with content written by experienced examiners. -Get exam ready with clear objectives which indicate the skills to be developed and the areas of the examination targeted. -Improve language skills with everyday transactional uses of English.

Get Qualified: Inspection and Testing

The Get Qualified series provides clear and concise guidance for people looking to work within the electrical industry. This book outlines why the inspection and testing of electrical installations is important, and what qualifications are required in order to test, inspect and certify. All you need to know about the subject of inspection is covered in detail, making this book the ideal guide for those who are new to the subject and experienced professionals alike. There are also sections on exam preparation, revision exercises and sample questions.

A Text-book of Applied Mechanics and Mechanical Engineering : Hydraulics, hydraulic and refrigerating machinery, with pneumatic tools

Ideals in Art: Papers Theoretical, Practical, Critical

Electrical Installations Technology covers the syllabus of the City and Guilds of London Institute course No. 51, the "Electricians B Certificate". This book is composed of 15 chapters that deal with basic electrical science and electrical installations. The introductory chapters discuss the fundamentals and basic electrical principles, including the concept of mechanics, heat, magnetic fields, electric currents, power, and energy. These chapters also explore the atomic theory of electric current and the electric circuit, conductors, and insulators. The subsequent chapter focuses on the chemistry of an electric cell, which is classified into two types, namely, the primary and secondary cells. This text also describes the principles, construction, types, and specifications of direct current machines. A chapter emphasizes the storage of energy for short periods in a capacitor, along with a brief discussion of its theory and construction. Other chapters are devoted to alternating-current systems. The remaining chapters cover the commonly used electrical measuring instruments in electrical installation work. This book is an invaluable source for electricians.
