Environmental Economics and Management: Theory, Policy, and Applications

Alfred Marshall, Principles of Economics (1890) – Founder of Modern (Neo-classical) Economics. His book Principles of Economics was the dominant textbook in economics for a long time and it is considered to be his seminal work.

Economics of Development

Real examples. Real companies. Real business decisions. Covering the core economics principles and providing engaging, relevant examples within just nineteen Chapters, Hubbard Essentials of Economics is the perfect teaching and learning resource for a one semester unit. The authors present economics as a dynamic, relevant discipline for Australasian students. The key questions students of first year economics ask themselves are: ‘Why am I here?’ and ‘Will I ever use this?’ Hubbard Essentials of Economics answers these questions by demonstrating that real businesses use economics to make real decisions every day. Each chapter of the text opens with a case study featuring a real business or real business situation, refers to the study throughout the Chapter, and concludes with An Inside Look—a news article format which illustrates how a key principle covered in the Chapter relates to real business situations or was used by a real company to make a real business decision.

Canadian Politics, Sixth Edition

Development of Economic Analysis

For four decades, Petroleum Refining has guided thousands of readers toward a reliable understanding of the field, and through the years has become the standard text in many schools and universities around the world offering petroleum refining classes, for self-study, training, and as a reference for industry professionals. The sixth edition of this perennial bestseller continues in the tradition set by Jim Gary as the most modern and authoritative guide in the field. Updated and expanded to reflect new technologies, methods, and topics, the book includes new discussion on the business and economics of refining, cost estimation and complexity, crude origins and properties, fuel specifications, and updates on technology, process units, and catalysts. The first half of the book is written for a general audience to introduce the primary economic and market characteristics of the industry and to describe the inputs and outputs of refining. Most of this material is new to this edition and can be read independently or in parallel with the rest of the text. In the second half of the book, a technical review of the main process units of a refinery is provided, beginning with distillation and covering each of the primary conversion and treatment processes. Much of this material was reorganized, updated, and rewritten with greater emphasis on reaction chemistry and the role of catalysis in applications. Petroleum Refining: Technology, Economics, and Markets is a book written for users, the practitioners of refining, and all those who want to learn more about the field.

Autobiographical accounts by Nobel laureates reflect the richness and diversity of contemporary economic thought and offer insights into the creative process. Lives of the Laureates offers readers an informal history of modern economic thought as told through autobiographical essays by twenty-three Nobel Prize laureates in Economics. The essays not only provide unique insights into major economic ideas of our time but also shed light on the processes of intellectual discovery and creativity. The accounts are accessible and engaging, achieving clarity without sacrificing inherently difficult content. This sixth edition adds four recent Nobelists to its pages: Eric Maskin, who illustrates his explanation of mechanism design with an example involving a mother, a cake, and two children; Joseph Stiglitz, who recounts his field's ideological wars linked to policy disputes; Paul Krugman, who describes the insights he gained from studying the model of the Capitol Hill Babysitting Coop (and the recession it suffered when more people wanted to accumulate babysitting coupons than redeem them); and Peter Diamond, who maps his development from student to teacher to policy analyst. Lives of the Laureates grows out of a continuing lecture series at Trinity University in San Antonio, which invites Nobelists from American universities to describe their evolution as economists in personal as well as technical terms. These lectures demonstrate the richness and diversity of contemporary economic thought. The reader will find that paths cross in unexpected ways—that disparate thinkers were often influenced by the same teachers—and that luck as well as hard work plays a role in the process of scientific discovery. International Political Economy

Business Environment

In this new Sixth Edition of *Development and Social Change: A Global Perspective*, author Philip McMichael describes a world undergoing profound social, political, and economic transformations, from the post-World War II era through the present. He tells a story of development in four parts—colonialism, developmentalism, globalization, and sustainability—that shows how the global development “project” has taken different forms from one historical period to the next. Throughout the text, the underlying conceptual framework is that development is a political construct, created by dominant actors (states, multilateral institutions, corporations and economic coalitions) and based on unequal power arrangements. While rooted in ideas about progress and prosperity, development also produces crises that threaten the health and well-being of millions of people, and sparks organized resistance to its goals and policies. Frequent case studies make the intricacies of globalization concrete, meaningful, and clear. *Development and Social Change: A Global Perspective* challenges us to see ourselves as global citizens even as we are global consumers.

Essentials of Economics

Petroleum Refining

The changing political situation in the Middle East poses challenges for the economies of the region, and some see none more vulnerable to collapse than Saudi Arabia's. Yet as this study demonstrates, the fundamentals of the Kingdom's economy are relatively robust, as over three quarters of GDP is accounted for by the non-oil sector, and impressive modern industries have been established, notably in petrochemicals. The financial system functions well, and despite

substantial government debts, there is low inflation and currency stability. The private sector increasingly drives the economy, although job creation has been insufficient to prevent rising youth unemployment. The development challenges Saudi Arabia faces are similar to those of other middle-income countries, and three decades of diversification have made the economy less unique than it was in the oil boom years of the 1970s.

A History of Economic Theory and Method

Known for its clarity, comprehensiveness, and balance, the latest edition of A History of Economic Theory and Method continues that tradition of excellence. Ekelund and Hébert's survey provides historical and international contexts for how economic models have served social needs throughout the centuries—beginning with the ancient Greeks through the present time. The authors not only trace ideas that have persisted but skillfully demonstrate that past, discredited ideas also have a way of spawning critical thinking and encouraging new directions in economic analysis. Coverage that distinguishes the Sixth Edition from its predecessors includes a detailed analysis of economic solutions by John Stuart Mill and Edwin Chadwick to problems raised by the Industrial Revolution; the role of psychology and “experiments” in understanding demand and consumer behavior; discussions of modern economic theory as it interrelates with other social sciences; and a close look at the historical development of the critical role of entrepreneurship, both in its productive and unproductive variants. The authors' creative approach gives readers a feel for the thought processes of the great minds in economics and underscores key ideas impacting contemporary thought and practice. Well-crafted discussions are further enriched by absorbing examples and figures. Thorough suggested reading lists give options for more in-depth explorations by interested readers.

Measuring National Income in the Centrally Planned Economies

Explorer's Guide Rhode Island (Sixth Edition)

In 1991 "Communism" collapsed. The cold war was over and the West had won. Whole cities, Moscow, St Petersburg, Warsaw, Beijing, Budapest and Bucharest, whole countries indeed, were privatised for nothing or next to nothing. This was probably the greatest expansion of the world market in history. And yet, according to national income measurements of the CIA, OECD, World Bank and IMF, this gigantic expansion of market production, led to a decline in market production in the very countries where it was introduced. How to explain this paradox? This book traces the origin of the West's national income measurements, from their origin in the 1923/4 Balance developed in the USSR, to the USA in the early 1930s via two Soviet exiles, Simon Kuznets and Wassily Leontief, and then back to the USSR again, after a vigorous debate, through a protégé of Kuznets, Abram Bergson. The AFC imputed national incomes to a centrally planned economy, based on physical not income measurements. This book provides a detailed assessment of the failure

of the AFC method to measure the real growth of actual market production during the transition period. This book provides a detailed account of the application of national income measurements to the centrally planned economies. It assesses all of the major contributors to this debate, including Colin Clark, Naum Jasny, Alexander Gerschenkron, G. Warren Nutter and Abram Bergson. It provides a new much higher, estimate of the expansion of market production during the transition period, based on an estimate of the actual growth of real market production. It discusses the very significant implications of this re-estimate for contemporary theories of globalisation.

The sixth edition of Canadian Politics offers a comprehensive introduction to Canadian government and politics by a highly respected group of political scientists. For this edition, the editors have organized the book into six parts. Part I examines Canadian citizenship and political identities, while Parts II and III deal with Canadian political institutions, including Aboriginal governments, and contain new chapters on the public service and Quebec. The chapters on Parliament, bureaucracy, political culture, political communications, social movements, and media are new to this edition. Finally, three chapters in the last section of the book analyze components of Canadian politics that have been gaining prominence during the last decade: the effects of globalization, the shifting ground of Canadian-American relations, and the place of Canada in the changing world order.
