During the past 20 years, the field of mechanical engineering has undergone enormous changes. These changes have been driven by many factors, including: the development of computer technology worldwide competition in industry improvements in the flow of information satellite communication real time monitoring increased energy efficiency robotics automatic control increased sensitivity to environmental impacts of human activities advances in design and manufacturing methods These developments have put more stress on mechanical engineering education, making it increasingly difficult to cover all the topics that a professional engineer will need in his or her career. As a result of these developments, there has been a growing need for a handbook that can serve the professional community by providing relevant background and current information in the field of mechanical engineering. The CRC Handbook of Mechanical Engineering serves the needs of the professional engineer as a resource of information into the next century.

Plesha, Gray, & Costanzo's Engineering Mechanics, 2e is the Problem Solver's Approach for Tomorrow's Engineers. Based upon a great deal of classroom teaching experience, Plesha, Gray, & Costanzo provide a visually appealing learning framework to your students. The look of the presentation is modern, like the other books the students have experienced, and the presentation itself is relevant, with examples and exercises drawn from the world around us, not the world of sixty years ago. Examples are broken down in a consistent manner that promotes students' ability to setup a problem and easily solve problems of incrementally harder difficulty. Engineering Mechanics is also accompanied by McGraw-Hill's Connect which allows the professor to assign homework, quizzes, and tests easily and automatically grades and records the scores of the students' work. Most problems in Connect are randomized to prevent sharing of answers and most also have a "multi-step solution" which helps move the students' learning along if they experience difficulty. Engineering Mechanics, 2e by Plesha, Gray, & Costanzo, a new dawn for statics and dynamics.
