### Dynamics in Logistics

Diesel Generator Handbook meets the need for an authoritative reference work covering the range of mechanical and electrical topics embodied in the practical design and application of diesel generating plant. It will be particularly welcomed in many parts of the developing world where the diesel generator is basic to the electricity supply system. The discussion covers, in fifteen chapters, the prime mover, power ratings, synchronous generators, load assessment, control principles and systems, switchgear and controlgear, standby power, fuels and lubricating oils, installation and commissioning, noise reduction, and plant operation and maintenance. The book thus caters for all who are concerned with the selection, specification, testing, commissioning, operation and maintenance of diesel-based generator systems: not only the practising plant or services engineers, but also non-specialist engineers and users. The young technician or trainee engineer who is embarking on a career in the supply industry will find this handbook an invaluable investment. L L J Mahon, FIEE, FBIM, after an engineering apprenticeship with BTH in Rugby, gained over 30 years' experience in the design, development, manufacture, installation and commissioning of both stationary and highly specialised mobile diesel

generator plant for a range of applications. An informative reference work covering the range of mechanical and electrical topics within the practical design and application of diesel generating plants Ideal for professionals concerned with diesel-based generator systems An invaluable source of information for the your technician or trainee engineer starting a career in the supply industry

Chronicling a high-profile and ambitious teacher preparation reform project that took place across 11 diverse U.S. institutions, this volume examines the strategies, program changes, accomplishments, and challenges from the Teachers for a New Era Project (TNE). TNE aimed to improve the preparation of K-12 teachers and address mounting criticisms of university-based teacher education. Funded primarily by the Carnegie Corporation of New York, TNE targeted the most persistent problems in university-based teacher preparation programs, focused on evidence-based assessment of program impact, and developed strategies for improvement. Exploring both the successes and tensions that arose from the program, this book contributes to future teacher education and program assessment endeavors, and offers lessons that can inform current policies and practices.

This scholarly and clear-sighted book is a happy marriage of history and technology and deserves to become standard reading for serious students of the First World War.' Prof. Richard Holmes 'Fascinating. Excellent pictures and a readable text as well. A wonderful story well told.' Military Illustrated 'The Devil's Chariots is the best single work on the development, from concept to fielding, of British armour in the First World War Glanfield is also entertaining in addition to being enlightening The Devil's Chariots is a decent read, and for specialists in the field it will be required reading The research is both broad and solid, and it appears that this will be the last word on this topic for some time to come.' Robert L. Bateman, contributor to The Journal of Military History, Lexington VA, and a member of the Society for Military History 'This book is in a class of its own it brings a new maturity to the study of the tank, most particularly from the human perspective, and best of all, it is very readable'. David Fletcher, Senior Archivist, Tank Museum, Bovington, author of The Tank 'This volume would be a great addition to the library of anyone wishing to try to understand World War 1 better. I greatly enjoyed

this evidently well-researched and highly interesting book It taught me much. I am grateful.' Royal Naval Sailing Association Journal 'Fascinating all military procurement officers should read it All this is excellently set out, especially the people who made [the tank weapon] possible and those who resented such new ideas.' Brig Fraser Scott, contributor to The Journal of the Royal Artillery Institution 'John Glanfield sheds new light on the tank's pioneers, their bizarre experimental machines and later triumphs This intensely researched work is drawn from previously unpublished primary sources.' Gun Mart 'This is classic research by a world authority.' The Driffield Post 'The author has a sharp eye for detail an exemplary history of a pivotal aspect of the First World War.' Worcester Evening News 'The Devil's Chariots can fairly claim to be the most intensively researched and detailed account of the tank's origins yet to appear.' Classic Arms & Militaria 'John Glanfield has combined meticulous historical research with a gift for narrative to present a story that both students of the Great War and the general reader will find fascinating. I thoroughly recommend this book.' John Gregory, contributor to The Journal of the Henry Williamson Society The Devil's Chariot is the product of six years of research by author John Glanfield, who wanted to tell the story of the birth of the tank in World War I, and, importantly, the men behind it. Based on personal recollections and official reports Glanfield uncovers the British tank pioneers and their odd machines, the men who supported the new weapon, those who refused to accept their worth and the brave crews who took them into battle.

As well as being spatial, planning is necessarily also about the future – and yet time has been relatively neglected in the academic, practice and policy literature on planning. Time, in particular the need for longer-term thinking, is critical to responding effectively to a range of pressing societal challenges from climate change to an ageing population, poor urban health to sustainable economic development. This makes the relative neglect of time not only a matter of theoretical importance but also increasing practical and political significance. A Future for Planning is an accessible, wide-ranging book that considers how planning practice and policy have been constrained by short-termism, as well as by a familiar lack of spatial thinking in policy, in response to major social, economic and environmental challenges. It suggests that failures in

planning often represent failures to anticipate and shape the future which go well beyond planning systems and practices; rather our failure to plan for the longer-term relates to wider issues in policy-making and governance. This book traces the rise and fall of long-term planning over the past 80 years or so, but also sets out how planning can take responsibility for twenty-first century challenges. It provides examples of successes and failures of longer-term planning from around the world. In short, the book argues that we need to put time back into planning, and develop forms of planning which serve to promote the sustainability and wellbeing of future generations.

The volume comprises the proceedings of the third International Conference on Dynamics in Logistics LDIC 2012. The scope of the conference targeted the identification, analysis, and description of the dynamics of logistic processes and networks. The spectrum ranged from the modeling and planning of processes and innovative methods like autonomous control and knowledge management to the new technologies provided by radio frequency identification, mobile communication, and networking. The growing dynamics in the area of logistics poses completely new challenges: Logistic processes and

networks must rapidly and flexibly adapt to continuously changing conditions. LDIC 2012 provided a venue for researchers from academia and industry interested in the technical advances in dynamics in logistics. The conference addressed research in logistics from a wide range of fields, e.g. engineering, computer science and operations research. The volume consists of two invited papers and of 49 contributed papers divided into various subjects including transport logistics, routing in dynamic logistic networks, modeling, simulation, optimization and collaboration in logistics, identification technologies, mathematical modeling in transport and production logistics, information, communication, risk and failure in logistic systems, autonomous control in logistic processes, global supply chains and industrial applications, and the Internet of Things in the context of logistics.

Three weeks of traveling in southeast Asia—through Thailand, Laos and Cambodia—found me experiencing a sense of wonder at the diversity and beauty of these lands. Walking these sacred sites, observing the people's lives in this part of the world—lives shaped by the path of Buddha—I'm aware of the privilege of being able to walk with them if only for a short time. A wise and insightful exploration of human navigation, what it means to be lost, and how we find our way. How is it that we can walk unfamiliar streets while maintaining a sense of direction? Come up with shortcuts on the fly, in places we've never traveled? The answer is the complex mental map in our brains. This feature of our cognition is easily taken for granted, but it's also critical to our species' evolutionary success. In *From Here to There* Michael Bond tells stories of the lost and found—Polynesian sailors, orienteering champions, early aviators—and surveys the science of human navigation. Navigation skills are deeply embedded in our biology. The ability to find our way over large distances in prehistoric times gave *Homo sapiens* an advantage, allowing us to explore the farthest regions of the planet. Wayfinding also shaped vital cognitive functions outside the realm of navigation, including abstract thinking, imagination, and memory. Bond brings a reporter's curiosity and nose for narrative to the latest research from psychologists, neuroscientists, animal behaviorists, and anthropologists. He also turns to the people who design and expertly maneuver the world we navigate: search-and-rescue volunteers, cartographers, ordnance mappers, urban planners, and more. The result is a global expedition that furthers our understanding of human orienting in the natural and built environments. A beguiling mix of storytelling and science, *From Here to There* covers the full spectrum of human navigation and spatial understanding. In an age of GPS and Google Maps, Bond urges us to exercise our evolved navigation skills and reap the surprising cognitive rewards.

Qual foi o posicionamento da imprensa brasileira diante dos fatos mais emblemáticos da ditadura civil-militar? Os órgãos de imprensa foram vítimas dos ditadores ou havia uma relação de simbiose e promiscuidade entre os donos de jornais e os governos presididos pelos generais? De forma fiel à realidade dos fatos, o jornalista Bruno Moraes Pereira da Costa aborda essas e outras questões, com base em profunda pesquisa em arquivos da Hemeroteca Digital Brasileira, da Biblioteca Nacional, acervos de jornais da época e imersão bibliográfica. Em uma extensa pesquisa em arquivos, em materiais bibliográficos de diversos autores e entrevistas, o autor narra o posicionamento da imprensa brasileira nos principais fatos da vida brasileira entre os anos de 1964 e 1985. Entre os acontecimentos estão a crise institucional que culminou na deposição do presidente João Goulart, o endurecimento com o regime de exceção do AI-5, a resistência armada contra os desmandos da ditadura, a morte do jornalista Vladimir Herzog e a reabertura política.
