Fundamental societal changes resulted from the necessity of people to get organized in mining, transporting, processing, and circulating the heavy metals and their follow-up products, which in consequence resulted in a differentiation of society into diversified professions and even societal strata. Heavy metals are highly demanded technological materials, which drive welfare and progress of the human society, and often play essential metabolic roles. However, their eminent toxicity challenges the field of chemistry, physics, engineering, cleaner production, electronics, metabolomics, botany, biotechnology, and microbiology in an interdisciplinary and cross-sectorial manner. Today, all these scientific disciplines are called to dedicate their efforts in a synergistic way to avoid exposure of heavy metals into the eco- and biosphere, to reliably monitor and quantify heavy metal contamination, and to foster the development of novel strategies to remediate damage caused by heavy metals.

By understanding how and when common sense fails, we can improve our understanding of the present and better plan for the future. Drawing on the latest scientific research, along with a wealth of historical and contemporary examples, Watts shows how common sense reasoning and history conspire to mislead us into believing that we understand more about the world of human behavior than we do; and in turn, why attempts to predict, manage, or manipulate social and economic systems so often go awry. It seems obvious, for example, that people respond to incentives; yet policy makers and managers alike frequently fail to anticipate how people will respond to the incentives they create. Social trends often seem to be driven by certain influential people; yet marketers have been unable to identify these “influencers” in advance. And although successful products or companies always seem in retrospect to have succeeded because of their unique qualities,

predicting the qualities of the next hit product or hot company is notoriously difficult even for experienced professionals. Watts' argument has important implications in politics, business, and marketing, as well as in science and everyday life.

New techniques to refresh and recharge your brands How do you establish and maintain a strong long-term relationship between your brand and your consumers? Successful brand managers know that it is all about trust and keeping the consumers engaged. The success of recent "green" campaigns as a means of connecting with, satisfying, and attracting new consumers is just the tip of the iceberg. As the international playing field continues to be leveled, in order to sustain and expand their success, brand owners must interact with their customers more than ever before, forging new and stronger links, and increasing their stock of social capital. At last, there is a book that addresses the growing significance of social capital in the business world. Brand Valued explores how as the strength, depth, and quality of interactions between a brand and its customers improve, increased opportunities to demonstrate trustworthiness arise. This in turn creates a self-fulfilling cycle, wherein trust begets social capital, which begets more trust—and even shared thinking—not to mention better sales. Brand Valued will receive the full support of Havas, the fifth largest global communication and marketing services group in the world. In easy to understand terms, and using concrete examples, Brand Valued provides: The tools necessary to stimulate dialogue—and new ways of thinking—between a brand and its intended audience Methods for extending brand messaging to wider audiences Ideas on how to make brands the engines of social capital, getting rid of unsustainable practices to foster more sustainable patterns of consumer behaviour Suggestions for the development of a new brand strategy that reduces costs through innovative and lasting solutions to problems Unpublished data on the role of consumer trust in new products based on research carried out by the Havas Group across over 150 brands in nine different markets A wiki component to the book in an accompanying website. Designed to forge stronger channels of dialogue and communication with customers and consumers, the book is a must-read for anyone committed to keeping their brand relevant in the twenty-first century.

For more than 160 years, the cannabis industry was a valued and trusted friend of the American people. Thirty-one consecutive presidents, including George Washington and Abraham Lincoln, didn't have a problem with the cannabis plant. It was the most valued commodity traded for on the free market until 1937. In *Secrets of the Cannabis Industry*, author Chuck Allen Jr. provides a look at the cannabis industry and the men and women who risk their family, friends, and freedom to work within it. Each chapter narrates a story from the subculture of cannabis entrepreneurs. There's Professor Muzzo, who unknowingly helped one of his students achieve financial success by selling a popular fast-food item spiced with a secret ingredient; a postal employee with a secret garden in his basement; an entrepreneur who made a fortune selling franchises for indoor-growing opportunities; and a fireman's wife who owned a video store with extra-special movie-rental benefits. *Secrets of the Cannabis Industry* considers the courage and the determination of these entrepreneurs and shares the secrets of how they became independent and financially successful in the cannabis industry.

100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.

December 2, 2004, started out like any other day for Gary Tim Collins. As a University of Toledo alumnus, Gary was looking forward to the Mid-American Conference championship game at Ford Field against the University of Miami with his friends. But he wouldn't see or remember the game. Just as he was about to sit down to enjoy the game, he was struck with seizures that landed him in Henry Ford's Intensive Care Unit in a coma for two weeks. It was the prayers of friends and loved ones that helped bring him back. This traumatic experience brought Gary closer to God, when he had previously struggled with finding his purpose and really felt God had something else in mind for him. That something else turned out to

be this book, *The Light That Illuminates the Flame*. In this book, Gary explores common themes of Christianity, like who God is, what he does in our lives, the importance of his Word, the life of Jesus Christ, and, in turn, the way we should live our lives as his faithful followers to draw near to him. It is a thank you to the Almighty God who gave all and saved a man from losing it all. Marty Pennington Lead Pastor Mainstreet Church Walbridge, Ohio. Gary Tim Collins taught for over twenty-four years in the Toledo public school system, working with handicapped and disadvantaged high school students. He lives in Ohio and is actively involved in his church. This is his first book. This is a book that would be good for any growing Christian to read. Gary takes much of his personal life experiences and puts them into layman's terms so that all can learn and grow. As you, like all of us, struggle with life's issues, this book will certainly help you work with your own struggles as well as prepare you to help others on their journey of life. Terry R. "This wide-ranging collection of essays re-opens the connection between science fiction and the increasingly science-fictional world. Kevin Alexander Boon reminds us of the degree to which the epistemology of science fiction infects modern political discourse. Károly Pintér explores the narrative structures of utopian estrangement, and Tamás Bényei and Brian Attebery take us deeper into the cultural exchanges between science fiction and the literary and political worlds. In the second half, Donald Morse, Nicholas Ruddick and Éva Federmayer look at the way in which science fiction has tackled major ethical issues, while Amy Novak and Kálmán Matolcsy consider memory and evolution as cultural batteries. The book ends with important discussions of East German and Hungarian science fiction by Usch Kiausch and Donald Morse respectively. I envisage that the book will find a market both among academics and as a recommended text to undergraduates as it offers interesting essays on important readers. The tendency for science fiction to be offered as a literature class to science majors is not usually considered, but this book would be particularly appropriate for such a market."
