Intermediate Microeconomics: A Modern Approach

Roger Arnold's ESSENTIALS OF ECONOMICS distills the core concepts of economics into a concise text that is reader-friendly, yet still complete in its coverage of topics. With a focus on real world examples and applications, Arnold conveys the impact of economic analysis on everyday life, insightfully explaining the economics of why Lebron James isn't in college, drug busts, and how spring break affects surrounding communities. Taking a more concise approach than some traditional principles of Economics texts, ESSENTIALS OF ECONOMICS continues to provide solid coverage of macroeconomic and microeconomic fundamentals. Thorough coverage of AD/AS, money & banking and monetary and fiscal policy, expectations theory, market structures and market failures gives students all the background necessary to either continue their studies in economics, or simply gain a new perspective on events around the world and in their lives through the versatile lens of economics.

Microeconomics

Now updated to include new chapters dedicated to the Global Economic Crisis. The most exciting new text in a generation, Chad Jones's Macroeconomics will change the way intermediate macroeconomics courses are taught. It is the first and only undergraduate text to present the Romer model of Endogenous Technological Change, which is integral to the way economists study growth theory today. Other texts stop at the Solow model, an approach first formulated in the 1950s. Jones presents the Romer model at an appropriate level for undergraduates. The text is written in an engaging, conversational style that makes students feel as though

they are sitting in on one of Professor Jones's lectures. When introducing new material, he presents it in a careful, patient manner and follows the discussion with case studies and worked examples. Each chapter includes two complete worked examples that walk students step-by-step through the material covered in that chapter. In addition, this is the first text in the intermediate macroeconomics market to be fully integrated with an online homework management system. The easy-to-use SmartWork homework management system offers extensive answer feedback as students work through a problem. [Click here to find out more](#)

Microeconomics

How should firms decide whether and when to invest in new capital equipment, additions to their workforce, or the development of new products? Why have traditional economic models of investment failed to explain the behavior of investment spending in the United States and other countries? In this book, Avinash Dixit and Robert Pindyck provide the first detailed exposition of a new theoretical approach to the capital investment decisions of firms, stressing the irreversibility of most investment decisions, and the ongoing uncertainty of the economic environment in which these decisions are made. In so doing, they answer important questions about investment decisions and the behavior of investment spending. This new approach to investment recognizes the option value of waiting for better (but never complete) information. It exploits an analogy with the theory of options in financial markets, which permits a much richer dynamic framework than was possible with the traditional theory of investment. The authors present the new theory in a clear and systematic way, and consolidate, synthesize, and extend the various strands of research that have come out of the theory. Their book shows the importance of the theory for understanding investment behavior of firms; develops the implications of this theory for industry dynamics and for government policy concerning investment; and shows how the theory can be applied to specific industries and to a wide variety of business problems.

This advanced economics text bridges the gap between familiarity with microeconomic theory and a solid grasp of the principles and methods of modern neoclassical microeconomic theory.

Global Economic Crisis

Economics for Managers, Global Edition

Across the Muslim world, ever greater numbers of women are going to work. In the span of just over a decade, millions have joined the workforce, giving them more earning and purchasing power and greater autonomy. In *Fifty Million Rising*, award-winning economist Saadia Zahidi illuminates this discreet but momentous revolution through the stories of the remarkable women who are at the forefront of this shift—a McDonald's worker in Pakistan who has climbed the ranks to manager;

the founder of an online modest fashion startup in Indonesia; a widow in Cairo who runs a catering business with her daughter, against her son's wishes; and an executive in a Saudi corporation who is altering the culture of her workplace; among many others. These women are challenging familial and social conventions, as well as compelling businesses to cater to women as both workers and consumers. More importantly, they are gaining the economic power that will upend entrenched cultural norms, re-shape how women are viewed in the Muslim world and elsewhere, and change the mindset of the next generation. Inspiring and deeply reported, *Fifty Million Rising* is a uniquely insightful portrait of a seismic shift with global significance, as Muslim women worldwide claim a seat at the table.
