Contraindications in Physical Rehabilitation

No other textbook provides coverage of the essential concepts of disease processes and disorders with the specific needs of the physical therapy assistant in mind. Pathology for the Physical Therapist Assistant provides coverage of disease processes and systemic disorders as well as guidelines, precautions, and contraindications for physical therapy interventions. Catherine Goodman, Kenda Fuller, and Robbie O'Shea share their expertise in a consistent, well-organized approach that defines each disorder, describes the appropriate physical therapy assessment and intervention, and rounds out the discussion with relevant case study examples based on established practice patterns. Chapters follow a consistent organization, first defining a disorder and then describing the appropriate physical therapy assessment and intervention. Full-color art throughout clearly depicts pathologies and interventions. Case studies provide examples of physical therapy applications to help you connect theory and practice and build strong clinical reasoning skills. Special boxes highlight Clinical Signs, Interventions, and Case Studies to alert you to important information within the text. Terminology and language from the Guide to Physical Therapy Practice is used throughout to familiarize you with standardized terminology used in practice. A companion Evolve website provides additional online learning activities including

Pediatric Rehabilitation is an important component of both Physiatry and Pediatrics. Given the potential survival time of the patient and the enormous emotional, social, and economic costs involved, the rehabilitation management of children is one of the most important areas of both specialties. This book will be the definitive text reference on this important area and is a great addition to Hanley and Belfuss impressive program of books in Physical Medicine and Rehabilitation. Drs. Molnar and Alexander have made a classic reference better than ever in this completely revised and updated work. Some of the major names in the field have contributed comprehensive yet highly practical chapters.

Designed to help therapists provide post-surgical rehabilitation based on best practices and evidence-based research, this comprehensive reference presents effective guidelines for postsurgical rehabilitation interventions. Its authoritative material is drawn from the most current literature in the field as well as contributions from expert physical therapists, occupational therapists, and athletic trainers affiliated with the Hospital for Special Surgery (HSS). A DVD accompanies the book, featuring over 60 minutes of video of patients demonstrating various therapeutic exercises spanning the different phases of postsurgical rehabilitation. Examples include hand therapy procedures, working with post-surgical patients with cerebral palsy, sports patient injuries, and pediatric procedures for disorders such as torticollis. Material represents the best practices of experts with the Hospital of Special Surgery, one of the best known and most respected orthopedic hospitals. Phases of treatment are defined in tables to clearly show goals, precautions, treatment strategies and criteria for surgery. Many of the treatment strategies are shown in videos on the accompanying DVD, enabling the user to watch the procedure that is discussed in the text. Information on pediatric and geriatric patients explores differing strategies for treating these populations. Treatments specific to sports injuries are presented, highlighting the different rehabilitation procedures available for athletes. An entire section on hand rehabilitation provides the latest information for hand specialists. Information on the latest treatment strategies for hip replacement presents complete information on one of the most common procedures. Easy-to-follow guidelines enable practitioners to look up a procedure and quickly see the recommended rehabilitation strategy. A troubleshooting section provides solutions for common problems that may occur following each phase of the rehabilitation process. Broad coverage addresses both traditional techniques as well as newer methods in a
