Any Small Goodness

In the traditional of great literary manifestos, Norton is proud to present this powerful work by Adrienne Rich. With passion, critical questioning, and humor, Adrienne Rich suggests how poetry has actually been lived in the world, past and present. In this essay, which was the basis for her speech upon accepting the National Book Foundation's Medal for Distinguished Contribution to American Letters, she ranges among themes including poetry's disparagement as "either immoral or unprofitable," the politics of translation, how poetry enters into extreme situations, different poetries as conversations across place and time. In its openness to many voices, Poetry and Commitment offers a perspective on poetry in an ever more divided and violent world. "I hope never to idealize poetry—it has suffered enough from that. Poetry is not a healing lotion, an emotional massage, a kind of linguistic aromatherapy. Neither is it a blueprint, nor an instruction manual, nor a billboard."

The Preparatory Manual of Explosives

In the late nineteenth and early twentieth centuries, working-class Americans had eating habits that were distinctly shaped by jobs, families, neighborhoods, and the tools, utilities, and size of their kitchens—along with their cultural heritage. How the Other Half Ate is a deep exploration by historian and lecturer Katherine Turner that delivers an unprecedented and thoroughly researched study of the changing

food landscape in American working-class families from industrialization through the 1950s. Relevant to readers across a range of disciplines—history, economics, sociology, urban studies, women’s studies, and food studies—this work fills an important gap in historical literature by illustrating how families experienced food and cooking during the so-called age of abundance. Turner delivers an engaging portrait that shows how America’s working class, in a multitude of ways, has shaped the foods we eat today.

Innovate or die For thirty years, Gary Shapiro has observed the world's most innovative businesses from his front-row seat as leader of the Consumer Electronics Association. Now he reveals the ten secrets of "ninja innovators" like Apple, Amazon, Google, Microsoft, and many others. What does it take to succeed? Discipline. Mission-oriented strategy. Adaptability. Decisiveness. And a will for victory. In short, today's most successful businesses are "ninja innovators." Drawn from Gary Shapiro's three decades of experience leading the consumer electronics industry, Ninja Innovation takes readers behind the scenes of today's top enterprises, uncovering their ten essential strategies for success. As head of the Consumer Electronics Association and its influential annual trade show, the International CES, Shapiro has worked with the most innovative companies in history—Intel, IBM, and Samsung, to name a few—focusing on creating policies and events that produce revolutionary products year after year. He has learned the key strategies that have guided these businesses to record-breaking profits, as well as the traps that have led so many others to crushing failure. In order to stay in front of the pace of innovation, Shapiro observes, top companies must operate as an elite strike force—just like the legendary medieval warriors known as ninjas. Ninjas weren't called upon to do the ordinary; they had to perform truly extraordinary tasks, while risking everything. As a highly trained martial-arts black belt himself, Shapiro mines the valuable insights of these centuries-old warriors to spotlight the secrets of agility, creativity, decisiveness, and reinvention that are essential for twenty-first-century leaders seeking breakthrough success. Taking readers inside the most cutting-edge businesses, Ninja Innovation is the ultimate guide to achieving victory in today's innovate-or-die economy.

"Comprised of footnotes to a non-existent text, *The Body: An Essay* is a meditation on absence, loss, and disappearance that offers a guarded "narrative" of what may or may not be a love letter, a dream, a spiritual autobiography, a memoir, or a scholarly digression, a treatise on the relation of life to book. Christian Bök describes Bouilly's groundbreaking text as one that "may simply annotate a fantastic biography from another reality, referring only to itself as a kind of dream within a dream. The reader can only fantasize about the original contexts that might have made such information significant to its author, and ultimately, implies that the body of any text consists of nothing but a void--filled with the exegetical projection of our own imagination." First published in 2002 and excerpted in such anthologies as *The Next American Essay* and *The Best American Poetry 2002*, *The Body: An Essay* continues to challenge conventional notions of plot and narrative, genre and form, theory and practice, unremittingly questioning the presumptive boundaries between reflection, imagination, and experience."--Easy Press website.

You will learn: * How dog training has evolved over the past 100 years, the strengths and weaknesses of various training styles, and to what extent you can intergrate your previous methods with clicker training. * The particular challenges you will face as you crossover from whatever style of training you have used in the past (compulsion, luring, etc.) to clicker training. * The detailed nuts and bolts of clicker training - from getting a behavior started, to methods of rewarding, to reducing the need to click and treat over time while still getting the results you want. * How to work with dogs trained with force or harsh methods and change them into behavior-offering dynamos.

An Introduction to Stochastic Modeling provides information pertinent to the standard concepts and methods of stochastic modeling. This book presents the rich diversity of applications of stochastic processes in the sciences. Organized into nine chapters, this book begins with an overview of diverse types of stochastic models, which predicts a set of possible outcomes weighed by their likelihoods or probabilities. This text then provides exercises in the applications of simple stochastic analysis to appropriate problems. Other chapters consider the study of general functions of independent, identically distributed, nonnegative random variables representing the successive intervals between renewals. This book discusses as well the numerous examples of Markov branching processes that arise naturally in various scientific disciplines. The final chapter deals with queueing models, which aid the design process by predicting system performance. This book is a valuable resource for students of engineering and management science. Engineers will also find this book useful.
