Strategic Management and Economics in Health Care

A thorough update to a best-selling text emphasizing how marketing solves a wide range of health care problems. There has been an unmet need for a health care marketing text that focuses on solving real-world health care problems. The all new second edition of Strategic Marketing for Health Care Organizations meets this need by using an innovative approach supported by the authors' deep academic, health management, and medical experience. Kotler, Stevens, and Shalowitz begin by establishing a foundation of marketing management principles. A stepwise approach is used to guide readers through the application of these marketing concepts to a physician marketing plan. The value of using environmental analysis to detect health care market opportunities and threats then follows. Readers are shown how secondary and primary marketing research is used to analyze

environmental forces affecting a wide range of health care market participants. The heart of the book demonstrates how health management problems are solved using marketing tools and the latest available market data and information. Since the health care market is broad, heterogenous, and interconnected, it is important to have a comprehensive perspective. Individual chapters cover marketing for consumers, physicians, hospitals, health tech companies, biopharma companies, and social cause marketing - with strategies in this last chapter very relevant to the Covid-19 pandemic. Each chapter gives readers the opportunity to improve marketing problem-solving skills through discussion questions, case studies, and exercises.

Strategic Management

Health and socio-economic development are so closely connected that it is impossible to achieve one without the other. While economic development in India has been gaining momentum over the last decade, our health system is at a critical point today. Government initiatives in public health have recorded some significant successes over time. However, the Indian health system is only ranked 118 among the 191 WHO member countries on overall health performance. Building health systems that are responsive to community needs, particularly for the poor requires politically difficult and administratively demanding decisions. Health should be a priority in its own right, as well as a means for economic

development and poverty reduction. The health sector is complex with multiple goals, multiple products and different beneficiaries. India is now well placed to develop a uniquely Indian set of health sector reforms. This will enable the health system meet the increasing expectations of its users and personnel. Managerial challenges to meet community needs efficiently and effectively are many. These include ensuring availability, access, affordability and equity in delivering health services. The ten chapters in this book cover important strategic issues of health care in India and include - health system planning and development, financing, financing mechanisms, public-private partnerships

Strategic Management of Technological Innovation, Sixth Edition

Few industries are buffeted from as many strong forces as healthcare. The industry is highly regulated, thus dramatically increasing costs and sometimes even interfering with the ability to deliver healthcare. New drugs, treatments, and medical technologies are so common that keeping track of them can be overwhelming, and incorporating them into patient care or administration can be costly and complicated. This book lays a stakeholder foundation for managing a healthcare organization strategically. It contains step-by-step tactics as well as examples of HCOs that are having success with various aspects of the stakeholder

approach in their organizations. As any experienced healthcare executive knows, making changes to a healthcare delivery system is like trying to modify an aircraft while it is in flight. The process is complicated and the consequences of mistakes can quickly lead to disaster. With this book, you'll get a new approach to managing healthcare within your organization, an approach that will unlock innovation and create more value for a broad group of industry participants.

health care (PHC) programs should be designed and managed. In the absence of an accepted methodology for discussing health management issues, it attempts to develop a conceptual framework suited to analyzing an environment of dynamic change. It applies this framework first to the management of primary health care programs provided by governments, and then to the role of the non-government sector in primary care. The paper draws broad clients. If the general approach adopted seems useful, the conceptual framework needs next to be applied to a series of specific country cases to test its validity and refine it, and to adapt the general conclusions to local cultural, administrative and political conditions.

Health Service Marketing Management in Africa (978-0-429-40085-8, K402492) Shelving Guide: Business & Management / Marketing Management The application of marketing to healthcare is a fascinating field that will likely have more impact on society than any other field of marketing. It's been theorized that an intrinsically unstable environment characterizes this very relevant emerging field, hence raising new questions. Changing regulations, discoveries, and new health treatments continuously appear and give rise to such questions. Advancements in technology not only improve healthcare delivery systems but also provide avenues for customers to seek information regarding their health conditions and influence their participatory behaviors or changing roles in the service delivery. Increasingly, there is a shift from a doctor-led approach to a more patient-centered approach. In Africa, the importance of marketing-driven practices in improving the delivery of healthcare services cannot be overemphasized. The issue of healthcare delivery and management is significant for policymakers, private sector players, and consumers of health-related services in developing economy contexts. Scholars

have strongly argued in favor of marketing and value creation in healthcare service delivery in Africa. Each country in Africa has its own issues. For example, long waiting times, unavailable medications, and unfriendly staff are just a sampling of issues affecting the acceptability of healthcare services. These examples highlight the need to utilize marketing and value creation tools in the delivery of healthcare services. Furthermore, there is a need for the integration of service marketing and management principles to enhance the delivery of quality healthcare across Africa and other developing economies which is the critical focus of this book. This book responds to calls for quality healthcare service management practices or processes from developing economy perspectives. Focusing primarily on African and other developing economy contexts, this book covers seven thematic areas: strategy in healthcare; marketing imperatives in healthcare management; product and pricing management in healthcare; distribution and marketing communications in healthcare; managing people in healthcare; physical evidence and service quality management in healthcare; and process management in healthcare.

Management of Hospitals and Health Services

Innovations in management are becoming more numerous and diverse, and are appearing in organizations providing many different kinds of products and services. The purpose of this book is to examine whether some widely-promoted examples of these management innovations – ranging from techniques such as Kaizen to

styles of leadership and the management of learning – can usefully be applied to organizations which provide healthcare, and applied in different kinds of health systems. Management Innovations for Healthcare Organizations is distinctive in selecting a wide and diverse range and selection of managerial innovations to examine. No less distinctively, it makes an adaptive, critical scrutiny of these innovations. Neither evangelist nor nihilist, the book instead considers how these innovations might be adapted for the specific task of providing healthcare. Where evidence on these points is available, the book outlines that too. Consequently the book takes an international approach, with contributions from Europe, the Middle East, Australia and North America. Each contributor is an expert in the management innovation which they present. This combination of features makes the book unique.

Chapters outline the research and methods used, expose gaps in the literature and encourage opportunities for future inter-disciplinary research. Topics include sport and climate change, sport and safeguarding air and water quality, education for sustainability, and sport policy. This is an invaluable resource for researchers in sport and environmental sustainability, and academics working in sport management, business, recreation and leisure studies, and sustainability programs, as well as sport policymakers and industry practitioners.
