TSRA Decision Algorithms in Cardiothoracic Surgery

Surgical Palliative Care

This text is presented to all cardiothoracic surgery residents, present and future. This unique application, developed by residents and national faculty, is a 100-chapter compendium with an individual algorithm on various topics to provide a foundation and framework of important cardiothoracic surgery topics with clinical decisions. As the field of cardiothoracic surgery continues to evolve, attention to key clinical decisions is necessary prior to incorporating indicated interventions. Very few textbooks focus on the decision algorithms in the diagnosis and management of clinical cardiothoracic pathologies. The Thoracic Surgery Residents Association (TSRA) have a clear and sustained commitment to education. The previous textbooks created under the auspices of this organization are among the most affordable and practical manuscripts in our field. It is our hope to provide this addition to the growing TSRA library under the same tradition. Although this field is ever changing, many of the basic principles remain the same: There are basic frameworks that are shared and can be used by those taking care of cardiothoracic patients. Very few textbooks focus on the decision algorithms in the diagnosis and management of clinical cardiothoracic pathologies. Adult Cardiac Surgery 1.

Included are new recommendations for treatment of primary and recurrent genital herpes and management of pelvic inflammatory disease; a new patient-applied medication for treatment of genital warts; and a revised approach to the management of victims of sexual assault. Revised sections describe the evaluation of arthritis and the diagnostic evaluation of congenital syphilis. These guidelines also include expanded sections concerning STDs among infants, children, and pregnant- women and the management of patients who have asymptomatic human immunodeficiency virus infection, genital warts, and genital herpes. Guidelines are provided for vaccine-preventable STDs, including recommendations for the use of patients and hepatitis B vaccines.

Anesthesia Crash Course is uniquely positioned to address the needs of new trainees in anesthesia. This book is written in a conversational tone, avoiding unnecessary jargon and distilling the key concepts of anesthesia into easy-to-remember tidbits - an approach in increasing demand by medical students and junior physicians. The audience for this book is chiefly new anesthesia residents, interns, medical students who rotate through anesthesia services, and nurse anesthetists. By demystifying the world of anesthesia, it provides a welcome resource to medical students and RNs who are considering additional training in this popular but poorly understood specialty. Surgical residents who feel they're not up to speed with what's happening on the other side of the "ether screen" would certainly also benefit from reading Anesthesia Crash Course. New anesthesia trainees face an extremely daunting learning curve. As they progress through training, they will read longer and more detailed treatises on every aspect of modern anesthesia. It is not realistic to imagine that someone might finish such a book in the first week of his or her training! Anesthesia Crash Course will serve as a bridge between a trainee's pre-anesthesia experience and more formal training. It can be read in the last month of internship, or in evenings while completing the first few weeks of anesthesia training. It can also serve as a medical student's accompaniment for a two-week anesthesia elective.
