Key Points: Vascular closure devices (VCD) appear to be safe when compared to manual compression or surgical closure. VCDs' main advantage seems to stem from lower time to hemostasis (TTH) and time to mobilization. In anticoagulated patients with 6-Fr femoral sheaths, the new Celt ACT VCD, which uses a stainless-steel permanent implant, seems to be safe and decreases TTH when

compared to manual pressure.

### **Handbook of Endovascular Interventions**

In today's healthcare environment, the real driver is value. Maximizing outcomes and minimizing costs or providing similar outcomes with lower cost in terms of actual numbers or recovery time will dominate our healthcare delivery system. An excellent example of this evolution is in the field of cardiovascular intervention. Dr. Jacques Kpodonu's Manual of Thoracic Endo-Aortic Surgery is a most timely and descriptive work in this burgeoning field. It provides an excellent overview of current technology and techniques, plus the endovascular expert can drill down into the details of the devices and technologies described and significantly enhance their knowledge and perspective. Procedural detail, excellent graphics, pertinent imaging studies, and relevant instruction are the mainstays of this text. The first chapter comprises the key overview and very comprehensively covers the platform - the hybrid OR, the tools, the accessories, and the medium - superb, state-of-the-art imaging modalities required to perform these advanced procedures. The text then moves into more technical details including options and instruction regarding access approaches and potential pitfalls of such. This is followed in ensuing chapters by dissemination of precise information, techniques, and indications for the most popular and utilized grafts including Boston Relay Stent Graft, Cook TX2 Zenith Stent Grafts, as well as the Gore and Medtronic Aortic Stent Grafts.
