This book is a compilation of high-yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramming for the boards). The authors are early-career pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. As with the first and second editions, it is our goal that this latest edition, continuing in the fast-access Washington Manual outline format, will fill this niche in our hectic world. A companion website offers the fully searchable text and an online image bank of over 2,800 fullcolor images (see the inside front cover for website access information)"--Provided by publisher.
